

ENVIRONMENTAL POLICY

AUTOTERMINAL Barcelona is a logistics platform for vehicles in the Mediterranean and Southern Europe, located in the Port of Barcelona. It occupies spacious and modern facilities that make it an advanced intermodal (sea, rail and road) vehicle transport centre, prepared to provide integrated solutions to the logistical challenges posed by globalisation.

Aware that our activity must be carried out in accordance with the principle of “sustainable development” in the environmental field, we have implemented and certified our environmental management system in accordance with current legislation, the ISO 14001 standard and the EMAS (Eco-Management and Audit Scheme) regulation.

We are committed to minimizing our environmental impacts, preventing pollution, making sustainable use of natural resources, investing in human resources and environmentally friendly technologies, and to setting annual objectives that allow us to remain in a process of continuous improvement.

Our commitment is extended to all our stakeholders and it is because of them that we make them participants in our objectives and inform them annually of our results through our Environmental Statement.

Carlos Artigas
Managing Director
